SUMMARY:

Software Engineer with around **4 years of experience** in designing and building **secure, scalable cloud-native applications** using **Java, Spring Boot, and Micro services architecture**. Experienced in developing **secure REST APIs** with a focus on **Identity and Access Management (IAM)** using **OAuth2.0, OpenID Connect (OIDC), Azure AD B2C, and OKTA**.

- Proficient in developing full-stack applications using **React.js, Typescript, and modern JavaScript frameworks**, with strong backend expertise in **Spring Boot, database design, and API integration.**
- Experienced in **Agile Scrum environments**, collaborating with cross-functional teams including developers, QA engineers, DevOps engineers, and product owners across the full development lifecycle.
- Skilled in leveraging **AI-assisted development tools** to improve productivity, accelerate debugging, and enhance code quality. Proven ability to deliver clean, maintainable code and end-to-end solutions in fast-paced, high-impact environments.

EDUCATION:

B. Tech from Ramachandra College of Engineering

WORK EXPERIENCE

Working as **Software Engineer** in **Tecnics Integration Technologies Private Limited** from June 2022 to present.

TECHNICAL SKILLS

- **Programming & Backend:** Java, Spring-Boot, Microservices Architecture, REST API Development.
- **API Security & Identity:** OAuth2.0, OpenID Connect (OIDC), Identity & Access Management (IAM), Azure AD B2C (Custom Policies), OKTA.
- **Frontend:** React.js, TypeScript, JavaScript, HTML, CSS.
- **Cloud Technologies:** AWS, Google Firebase.
- **Databases**: MySQL, PostgreSQL, MSSQL, MongoDB.
- **DevOps & Tools:** Git, Swagger, Postman, Eclipse, VS Code, HCL Volt MX.
- **AI Development Tools:** GitHub Copilot, ChatGPT, AI-assisted code generation & debugging
- **Development Practices:** Agile / Scrum, REST API Design, Code Reviews, Secure API Development.

PROFESSIONAL EXPERIENCE:

Software Engineer
Tecnics Integration Technologies Pvt Ltd
June 2022 – Present

- Designed and developed **secure REST APIs using Java and Spring Boot**, supporting scalable enterprise applications.
- Implemented **secure authentication and authorization mechanisms** using OAuth2.0 and OpenID Connect.
- Collaborated with **cross-functional teams including developers, QA, and DevOps engineers** to deliver high-quality software solutions.
- Participated actively in **Agile Scrum ceremonies including sprint planning, stand-ups, backlog grooming, and retrospectives**.
- Conducted **code reviews and debugging sessions** to improve application quality and maintainability.
- Optimized application performance and resolved production issues in high-traffic systems.
- Designed and maintained database schemas and optimized queries for improved performance.
- Collaborated with DevOps teams to support **application deployment and release workflows**.

PROJECTS DETAILS

PROJECT #1

PROJECT NAME	:	**Al Wataneya Auctions (AWA)**
CLIENT	:	HCL
TECHNOLOGIES	:	Java, Spring Boot, Java Script
DATABASE	:	MSSQL
TOOLS USED	:	HCL Volt MX, Eclipse, SQL Server Management Studio.
IDENTITY	:	Azure AD B2C (Custom Policies)
PROJECT MEMBERS	:	6
PROJECT DURATION	:	Nov 2024 – Present

Project Overview:

Al Wataneya Auctions (AWA) is a **Dubai-based digital e-auction platform** used for vehicle auctions. The project involves modernizing the entire system, enhancing performance, and integrating secure user authentication with Azure AD B2C.

Responsibilities:

- Rebuilt the entire platform by **migrating a legacy system to a modern microservices architecture**, improving scalability, maintainability, and performance. Designed, developed, and optimized REST APIs using Spring Boot, ensuring secure and high-performing service communication.
- Designed and developed **secure REST APIs using Java and Spring Boot**, enabling high-performance service communication between backend services.
- Integrated **Azure AD B2C for identity and access management**, implementing authentication, authorization, and role-based access control.
- Implemented **OAuth2.0 and OpenID Connect (OIDC)** authentication flows to secure APIs and user access.
- Migrated the database from **MySQL to MSSQL**, including schema redesign, data migration, and performance optimization.
- Leveraged **AI-assisted development tools (GitHub Copilot and ChatGPT)** to accelerate backend API development, automate boilerplate code generation, and assist in debugging complex authentication flows.
- Utilized AI tools for **code optimization, documentation generation, and improving development productivity** during API implementation.
- Participated actively in **Agile Scrum cycles including sprint planning, development, testing, and production releases**.
- Performed **performance tuning, bug fixing, and production issue resolution** to maintain system reliability.

PROJECT #2

PROJECT NAME	:	**Employee Web Portal**
CLIENT	:	Internal Product
TECHNOLOGIES	:	Java, Spring Boot, Typescript, React.js.
CLOUD TECHNOLOGIES	:	Google Firebase
DATABASE	:	Mongo DB
TOOLS USED	:	VS Code, Eclipse, Mongo Atlas
IDENTITY	:	OKTA
PROJECT MEMBERS	:	2
PROJECT DURATION	:	Dec 2023 – Nov 2024.

Project Overview:

Employee Web Portal is an **internal enterprise portal** designed to streamline employee operations, manage documents, authenticate users securely, and integrate backend workflows with cloud storage.

Responsibilities:

- Designed and developed the **complete full-stack architecture** using **React.js, TypeScript, and Spring Boot**. Built scalable REST APIs using Spring Boot, including dynamic APIs capable of handling complex and nested data structures.
- Built **scalable REST APIs** capable of handling complex and nested data structures for enterprise workflows.
- Implemented **secure authentication and role-based access control using OKTA Identity Provider**.
- Integrated **Google Firebase cloud storage** for secure document upload and management.
- Developed **QR code generation and scanning functionality** to map employee documents to invoices and workflows.
- Designed and optimized **MongoDB schema structures, indexing strategies, and query performance**.
- Leveraged **AI-assisted development tools such as GitHub Copilot and ChatGPT** to accelerate frontend and backend development, generate reusable code components, and assist in debugging.
- Used AI tools to **improve code quality, automate documentation creation, and speed up feature development cycles**.

PROJECT #3

PROJECT NAME	:	**Tata Play**
CLIENT	:	Tata
TECHNOLOGIES	:	Java, Spring Boot, React.js.
DATABASE	:	MySQL
TOOLS USED	:	Eclipse, VS Code.
PROJECT MEMBERS	:	5
PROJECT DURATION	:	Jun 2022 – Nov 2023

Project Overview:

Tata Play MDU is a **Multi-Dwelling Unit management system** used for managing customer connections, apartment units, service workflows, and operational processes. This project involved supporting the existing production system and gradually modernizing legacy modules.

Responsibilities:

- Initially joined as a **Support Engineer**, handling production issues, analyzing tickets, and resolving defects to ensure stable system operations. Built scalable REST APIs using Spring Boot, including dynamic APIs capable of handling complex and nested data structures.
- Migrated key legacy modules from **Spring MVC to Spring Boot**, improving system performance, maintainability, and code quality.
- Developed automation workflows for **CSV upload, data validation, and error tracking**, reducing manual effort and improving accuracy.
- Designed and maintained relational structures in **MySQL**, ensuring data integrity, optimized queries, and smooth data flow across modules. Created comprehensive API documentation using **Swagger** for easier integration and internal reference.
- Contributed to designing application workflows with **role-based access**, delivering differentiated screens and features for various user roles.
- Collaborated closely with the development team for **code reviews, debugging, troubleshooting**, and resolving production issues.
- Worked on feature enhancements, bug fixes, and module-level improvements based on business requirements.
- Provided end-to-end **production support**, ensuring timely resolution of user-reported issues and maintaining system uptime.
